### **LK109 Sack Truck**

Clean up any feed sprues remaining and check the fit of the wheels onto the axle stubs

The platform plate is the first part to fit making sure the two tabs tuck under the axle shaft.

Turn the truck over and fit the rear frame to the handle shafts adjust the bottom of the frame to slot into the cut out on the platform plate

Then fold the copper wire into a U shape to brace up the handle shafts, this sits onto the two rear platform tabs behind the axle to achieve a neat fit file a small flat on the top of the brace where it mats up with the handles

Once the model is painted and weathered fit the wheels with the washers between the axle stubs and the wheel with the caps fitted on the outside of the wheel itself
